MAIL DATE

DELIVERY MODE

11/01/2007

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

**Office Action Summary**

Application No.

10/776,648

Applicant(s)

LEKOVIC ET AL.

Examiner

John Cooney

Art Unit

1796

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 04 September 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-25 and 48-54 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-25 and 48-54 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_.

Art Unit: 1796

Applicant's arguments filed 9-4-07 have been fully considered but they are not persuasive.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-25 and 48-54 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants' inserted limitation contains subject matter that was described in the originally filed supporting disclosure. Paragraph [0019] does not provide support for the "hydrophobic polyol biopolymer comprising an ester of a fatty acid and glycerol...that...is present in (an amount) up to 40 wt% of the total polyol component". It is not seen where support for this range of values for this particular selection of polyol is provided for in the originally filed supporting disclosure. This is a new matter rejection.

Claims 1-25 and 48-54 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application

Art Unit: 1796

was filed, had possession of the claimed invention. Applicants' inserted limitation contains subject matter that was described in the originally filed supporting disclosure. It is not seen where support for the instantly claimed polyol being defined as a "biopolymer" is provided for in the originally filed supporting disclosure. This is a new matter rejection.

Claims 1-25 and 48-54 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants' inserted limitation referring to a "non-biopolymer" contains subject matter that was described in the originally filed supporting disclosure. It is not seen where support for the instantly claimed polyol being defined as a "non-biopolymer" is provided for in the originally filed supporting disclosure. It has been held that the express exclusion of certain elements implies the permissible inclusion of all other elements not so expressly excluded which clearly demonstrates that the introduction of negative limitations not explicitly provided for by the specification as originally filed do, in fact, introduce new concepts and are therefore new matter. Ex parte Grasselli 231 USPQ 394. This is a new matter rejection

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1796

Claims 1-25 and 48-54 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The omission of the terminology "an amount" from applicants' claimed polyol range renders determination of what is intended by the claimed range of values confusing as to intent.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 and 48-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsai (4,673,696) in view of Kurth et al.(2002/0121328).

Tsai discloses preparations of rigid polyurethane foams through employment of combinations of hydroxy functional acrylates and other polyols in reaction with polyisocyanate components inclusive of alcohol-modified prepolymer packages prepared in the presence of blowing agents and catalysts inclusive of the tertiary amines (see abstract, column 2 lines 37– 59, column 3 line 60 et seq., column 4 line 51, and column 5 lines 8-11 and 27-49, as well as, the entire document). Blowing agents

Art Unit: 1796

such as chemically active water are readily looked to and envisioned from the teachings of Tsai and are not seen as elements of distinction in the patentable sense. Further, the densities of applicants' claims are values associated with the selection and content of blowing agent and are seen to be readily envisioned from the teachings of Tsai as well.

Tsai differs from the instant claims in that prepolymers derived from the active hydrogen containing compounds as claimed are not particularly set forth. However, Tsai sets forth within his own disclosure the necessary polyols which would be looked to in the making of the prepolymers of applicants' claims. Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the polyols and hydroxy functional acrylates disclosed by Tsai as the modifying components in the making of the prepolymers of Tsai for the purpose of providing acceptable active hydrogen functionality in the facilitation of the realization of targeted formation of segmented structures within the practice of the preparations of Tsai in order to arrive at the products and processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

Tsai further differs from applicants' claims in that hydrophobic bio-polymers such as the hydrophobic polyols of applicants' claims are not particularly utilized. However, Kurth et al. disclose the usefulness of polyols of such natural oils as soybean oils in the preparation of polyurethane foams for the purpose of deriving polyurethane products from renewable resources(see paragraph [0010] and [0012], as well as, the entire document). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the biobased polyols of Kurth et al. as the hydrophobic polyol in

Art Unit: 1796

the work-up of the products of Tsai for the purpose of employing renewable reactants in deriving useful products in order to arrive at the products and processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

The additional polyols of applicants' newly submitted claims 51-54 are directed towards well known polyols from the urethane art useful for their well studied isocyanate reactive effect, and their employment for the purpose of imparting such reactive effects would have been well within the skill and obvious to one having ordinary skill in the art.

The following previous arguments are maintained:

Applicants' arguments have been considered. However, rejection is maintained for the reasons set forth above. Applicants' argue that Tsai does not offer motivation to utilize the polyols used in the prepolymer of their claims. However, Tsai recognizes employment of isocyanate functional prepolymers in the practice of their invention. Although Tsai does not go into the specifics of the materials used to arrive at the isocyanate functional prepolymers, it is well studied and understood within the purview of the ordinary practitioner that it is OH functional materials that can be employed in the making of the isocyanate functional prepolymers identified by applicants. Examiner maintains that it would have been obvious for one having ordinary skill in the art to have looked to the OH functional materials within Tsai for the purpose of providing the OH functionality needs in the making of the isocyanate functional prepolymers described by Tsai, and it is maintained that examiner's statement of motivation to do so is proper.

Regarding the ranges of functionality values for the polyisocyanate component of applicants' claims, it is held that this element is not a distinguishing feature of applicants' claims over Tsai as Tsai specifically recites that functionalities of 2-4 are preferred in their invention (see column 4 line 53).

Regarding the combination of Kurth et al. with the teachings of Tsai, it is maintained that combination of the teachings for the reasons as set forth above is proper, and applicants' arguments do not overcome the combination set forth. Specifically, Kurth et al.'s lacking of specific reference to "rigid" foams does not render the teachings non-analogous. The teachings are analogous for their shared concern of making polyurethane foams. Further, the claims' recitation of the term "rigid" without definition of degree of rigidity/flexibility does not serve as a limitation in the patentable sense without said further definition of degree being set forth in the claims.

Art Unit: 1796

Applicants' arguments that the connection between Kurth et al. and Tsai has not been identified. This is not understood. However, in an effort to expedite prosecution examiner has attempted to clarify the connection in the recitation of the rejection above. As to applicants' arguments about the hydrophobicity of the polyols of Kurth et al. Examiner holds and maintains that such is a characteristic intrinsic to the oil materials of Kurth et al. which have not had additional -OH groups added thereto. Applicants have not shown their hydrophobic polyols to be patentably different from the vegetable oil polyols of Kurth et al. which meet even the most narrow hydrophobic polyol of applicants' claims, that of claim 48.

Applicants' arguments concerning distinction based on degrees of water absorption characteristics are unpersuasive as the terminology of degree, "decreased water absorption characteristic", does not serve to set forth a meaningful limitation in the patentable sense as far as determining what amounts of "absorption" are included or excluded by this terminology.

Applicants' arguments about the polyols of Kurth et al. that have added -OH groups are noted. However, such does not negate Kurth et al.'s full disclosure which does teach employment of oils without added -OH groups.

Distinction based on the recitation of the foams being "rigid" are unpersuasive as the term of degree, "rigid" do not serve to be distinguishing of the claims over the preparations taught or fairly suggested by the combinations of the cited prior art.

Applicants' claims 49-50 are additionally noted. However, the claims do not provide elements or features which serve as distinguishing limitations over the formed preparations disclosed by the prior art.

Applicants' latest arguments have been considered. However, rejection is maintained as proper. As repeated above, it is maintained that Kurth et al. discloses employment of oils without added -OH groups. As to amounts of the respective polyols components, it has long been held that where the general conditions of the claims are disclosed in the prior art, discovering the optimal or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233; *In re Reese* 129 USPQ 402 . Further, a prima facie case of obviousness has been held to exist where the proportions of a reference are close enough to those of the claims to lead to an expectation of the same properties. *Titanium Metals v Banner* 227 USPQ 773. (see also MPEP 2144.05 I) Similarly, it has been held that discovering the optimum value of a result effective

Art Unit: 1796

variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272,205 USPQ 215 (CCPA 1980). Variation in the amounts of these respective reactive components for the purpose of controlling their reactive effects would have been within the skill of the ordinary practitioner in the art with the expectation of success, and applicants have not demonstrated new or unexpected results commensurate in scope with the scope of their claims associated with the selections and operation within the ranges of values of their claims.

Claims 1-25, 48-54 are rejected under 35 U.S.C. 103(a) as being obvious over Lekovic et al.(6,803,390)&(6,699,916), each taken alone, in view of Kurth et al.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer

Art Unit: 1796

in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(I)(1) and § 706.02(I)(2).

The Lekovic et al. patents disclose preparations of polyurethane foams through formation of isocyanate-terminated prepolymers derived from the reaction of isocyanate with hydroxy functional acrylates and other polyols followed by reaction of the prepolymer formed with additional polyols in the presence of catalyst and water as a blowing agent (see the documents in their entirety).

The Lekovic patents differ from applicants' claims in that hydrophobic biopolymers such as the hydrophobic polyols of applicants' claims are not particularly utilized. However, Kurth et al. disclose the usefulness of polyols of such natural oils as soybean oils in the preparation of polyurethane foams for the purpose of deriving polyurethane products from renewable resources(see paragraph [0010] and [0012], as well as, the entire document). Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the biobased polyols of Kurth et al. as the hydrophobic polyol in the work-up of the products of the Lekovic et al. patents for the purpose of employing renewable reactants in deriving useful products in order to arrive at the products and processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results.

The additional polyols of applicants' newly submitted claims 51-54 are directed towards well known polyols from the urethane art useful for their well studied isocyanate

Art Unit: 1796

reactive effect, and their employment for the purpose of imparting such reactive effects would have been well within the skill and obvious to one having ordinary skill in the art.

The following previous arguments are maintained:

Applicants' arguments have been considered. However, rejection is maintained for the reasons set forth above. It is maintained that the teachings of Kurth et al. are properly combined with the teachings of Lekovic et al. Applicants' arguments do not overcome the combination set forth. Specifically, Kurth et al.'s lacking of specific reference to "rigid" foams does not render the teachings non-analogous. The teachings are analogous for their shared concern of making polyurethane foams. Further, the claims' recitation of the term "rigid" without definition of degree of rigidity/flexibility does not serve as a limitation in the patentable sense without said further definition of degree being set forth in the claims.

Applicants' arguments are similar those made in addressing the rejection over Tsai in view of Kurth et al. set forth above, and examiner hold his positions set forth above to apply here as well.

Applicants' latest arguments have been considered. However, rejection is maintained as proper. It is maintained that Kurth et al. discloses employment of oils without added -OH groups. As to amounts of the respective polyols components, it has long been held that where the general conditions of the claims are disclosed in the prior art, discovering the optimal or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233; *In re Reese* 129 USPQ 402 . Further, a prima facie case of obviousness has been held to exist where the proportions of a reference are close enough to those of the claims to lead to an expectation of the same properties.

*Titanium Metals v Banner* 227 USPQ 773. (see also MPEP 2144.05 I) Similarly, it has been held that discovering the optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272,205 USPQ 215 (CCPA 1980).

Variation in the amounts of these respective reactive components for the purpose of

Art Unit: 1796

controlling their reactive effects would have been within the skill of the ordinary practitioner in the art with the expectation of success, and applicants have not demonstrated new or unexpected results commensurate in scope with the scope of their claims associated with the selections and operation within the ranges of values of their claims.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-25, 48-54 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,803,390 and claims 1-19 of U.S. Patent No. 6,699,916, each taken alone, in view of Kurth et al.

The claims of the Lekovic et al. patents disclose preparations of polyurethane foams through formation of isocyanate-terminated prepolymers derived from the reaction of isocyanate with hydroxy functional acrylates and other polyols followed by reaction of the prepolymer formed with additional polyols in the presence of catalyst and water as a blowing agent. The claims of the Lekovic et al. patents differs from applicants' claims in that hydrophobic bio-polymers such as the hydrophobic polyols of applicants' claims are not particularly utilized. However, Kurth et al. disclose the usefulness of polyols of such natural oils as soybean oils in the preparation of polyurethane foams for the purpose of deriving polyurethane products from renewable resources(see paragraph [0010] and [0012], as well as, the entire document).

Accordingly, it would have been obvious for one having ordinary skill in the art to have employed the biobased polyols of Kurth et al. as the hydrophobic polyol in the work-up of the products of claims of the Lekovic et al. patents for the purpose of employing renewable reactants in deriving useful products in order to arrive at the products and processes of applicants' claims with the expectation of success in the absence of a showing of new or unexpected results. The additional polyols of applicants' newly submitted claims 51-54 are directed towards well known polyols from the urethane art useful for their well studied isocyanate reactive effect, and their employment for the purpose of imparting such reactive effects would have been well within the skill and obvious to one having ordinary skill in the art.

Art Unit: 1796

The following previous arguments are maintained:

Applicants' arguments have been considered. However, rejection is maintained for the reasons set forth above. It is maintained that the teachings of Kurth et al. are properly combined with the teachings of Lekovic et al. Applicants' arguments do not overcome the combination set forth. Specifically, Kurth et al.'s lacking of specific reference to "rigid" foams does not render the teachings non-analogous. The teachings are analogous for their shared concern of making polyurethane foams. Further, the claims' recitation of the term "rigid" without definition of degree of rigidity/flexibility does not serve as a limitation in the patentable sense without said further definition of degree being set forth in the claims. Applicants' arguments are similar those made in addressing the rejection over Tsai in view of Kurth et al. set forth above, and examiner hold his positions set forth above to apply here as well.

Applicants' latest arguments have been considered. However, rejection is maintained as proper. It is maintained that Kurth et al. discloses employment of oils without added -OH groups. As to amounts of the respective polyols components, it has long been held that where the general conditions of the claims are disclosed in the prior art, discovering the optimal or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233; *In re Reese* 129 USPQ 402 . Further, a prima facie case of obviousness has been held to exist where the proportions of a reference are close enough to those of the claims to lead to an expectation of the same properties.

*Titanium Metals v Banner* 227 USPQ 773. (see also MPEP 2144.05 I) Similarly, it has been held that discovering the optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Variation in the amounts of these respective reactive components for the purpose of controlling their reactive effects would have been within the skill of the ordinary practitioner in the art with the expectation of success, and applicants have not demonstrated new or unexpected results commensurate in scope with the scope of their.

Art Unit: 1796

claims associated with the selections and operation within the ranges of values of their claims.

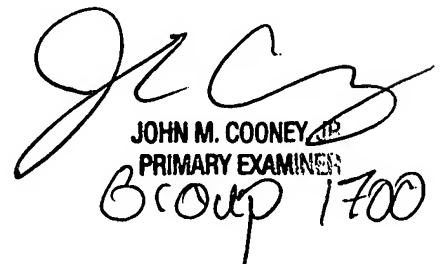

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Cooney whose telephone number is 571-272-1070. The examiner can normally be reached on M-F from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
